

PHILIP KITCHER

RADICAL PRAGMATISM

6PM JUNE 12

„To make social progress is to solve problems, and the worth of human lives, of autonomy and of community provides the matrix for discerning those problems“

Philip Kitcher is a renowned philosopher of science, ethics and society. He holds the Dewey Professorship at Columbia University and has deeply influenced debates in many fields of philosophy by exploring contested public issues such as religion, climate change or the role of science in a democracy.

PUBLIC LECTURE

Organized by GRK 2073 »Integrating Ethics and Epistemology of Scientific Research«, a joint DFG-funded project of the philosophy departments at Leibniz Universität Hannover and Universität Bielefeld.
