# **Social Epistemology and the Replicability Crisis**

Replicability is widely taken to ground the epistemic authority of science. However, in recent years, important published findings in the social, behavioral, and biomedical sciences have failed to replicate, suggesting that these fields are facing a “replicability crisis.” For philosophers, the crisis should not be taken as bad news but as an opportunity to do work on several fronts, including conceptual analysis, history and philosophy of science, research ethics, and social epistemology. This talk shows how recent work on social epistemology can inform debates about replicability, focusing specifically on the reward system of science and the division of cognitive labor.

Monday, December 2, 2019  
16:00 – 17:15

Leibniz University Hannover  
Conti-Hochhaus  
Königsworther Platz 1  
30167 Hannover
